

Bitumen Waterproofing

| Description | FORCE DALLE Flame Free is a stabilised polyester reinforced, SBS elastomeric modified bitumen waterproofing membrane with a peel-off film under surface. The under surface and lap joints are self-adhesive. On the upper surface there is a marker line along the selvedge indicating the 100mm lap width. |
|--------------------|---|
| Use | Top layer of FORCE DALLE NEO flame free inverted, self-adhesive, single layer waterproofing system on inaccessible roofs under added protection. |
| Application method | Fully bonded, with fully sealed joints, by flame free self-adhesive hot air welding techniques, to form a continuous watertight layer. |
| | The Force Dalle Neo-Bitumen flame free membrane must be laid loose and positioned prior to removal of the protective silicone release film from the underside of roll. |
| | Simultaneously unroll the membrane and remove the protective silicone release film exposing the Neo-Bitumen self-adhesive surface and ensure full adhesion to the membrane / prepared surface below, using hot air activation/flame-free tooling as necessary. |
| | A heavy metal roller should be used to remove any air bubbles and ensure full bonding is achieved. |
| | Lap joints are secured using flame free self-adhesive hot air tooling and a 2mm bead of bitumen should be visible along the selvedge. |
| | At head laps mineral granules should be heated and removed using flame free hot air tooling techniques ensuring a black to black bond is achieved and a 2mm bead of bitumen visible along the head lap. |

| Storage | Rolls to be stored upright and away from heat. | | | |
|-------------|--|--|--|--|
| Composition | (indicative) | | | |

| Reinforcement (g/m²) : | Stabilised polyester | 180 |
|-------------------------------|------------------------------|-------|
| Binder (g/m²) : | SBS elastomer | 4,600 |
| Surface finish (g/m²): | Macro-perforated film + sand | 100 |
| Under surface finish (g/m²) : | Peel-off silicone film | 40 |
