

Technical Data Sheet

VAP ALU ADH

Self Adhesive Membrane, Air & Vapour Control Layer (AVCL),
Base & Underlayer

Description	<p>VAP-ALU ADH is an air and vapour control layer with sand on the surface and a self-adhesive under surface. Minimum width of seldedge is 8 cm.</p> <p>The undersurface and longitudinal side laps are self-adhesive. End laps must be bonded by torch-on technique over a 15cm area.</p>
Use	<p>An air and vapour control layer (AVCL) low permeability membrane used as part of a system to control the movement of air, water vapour and heat leakage from within the building. Can also be used as base or underlayer as part of a multi-layer waterproofing system.</p> <p>The choice of AVCL will depend on the degree of air and vapour pressure produced, the specified roof deck/slab and the need for a robust temporary waterproofing layer.</p> <p>VAP ALU ADH is suitable for use in bitumen, single ply and liquid warm roof waterproofing systems, particularly in high humidity conditions.</p>
Application method	<p>Installed fully bonded, with fully sealed joints, using self-adhesive/hot air techniques to form a continuous layer.</p>
Storage	<p>Rolls to be stored upright and away from heat.</p>
Composition	<p>(indicative). See below.</p>

Reinforcement (g/m²) :	Composite aluminium + glass fibre	120
Binder (g/m²) :	SBS elastomer	2,700
Surface finish (g/m²) :	Sand+silicone selvedge	270
Under surface finish (g/m²) :	Silicone film	60
